- C++ DSA
- Flutter
  Python
  Machine Leaning
  React.js
  Next.js

EXPERIENCE

Customizable Desktop Assistant

Developed a Windows desktop assistant using Python, integrating libraries such as os, pyttsx3, and speech recognition. This assistant supports natural language processing (NLP) to streamline and simplify various tasks, including playing selected music from the user's playlist and opening applications. It enhances user productivity by offering a more efficient and intuitive way to interact with the system.

Mega Project on NLP

Developed a comprehensive end-to-end restaurant ordering system, where customers can efficiently place orders through a trained chatbot that supports both text and natural language processing (NLP). The project leverages React for the frontend, FASTAPI for the backend, and MYSQL for database management, with the chatbot built using Google Dialogflow. This solution significantly streamlines the ordering process, reducing wait times and eliminating the need for queues.

EDUCATION AND ACHIEVEMENTS

High School Education and Achievements

- Completed my high school education from ABPS
- Passed class 10 with 92.2% and class 12 with 90%
- District level Football Player
- Was opted as Head Boy of the School

Graduation

Currently pursuing my Bachelor in Engineering with Specialization in Artificial Intelligence and Machine Learning from Chandigarh University, Gharuan, Punjab.
